

IT Security & Network Analyst

Rockpoint Gas Storage is the largest independent owner and operator of natural gas storage in North America, with strategically located assets in key natural gas producing and consuming regions. Rockpoint Gas Storage owns and operates multiple facilities, including the AECO Hub^(TM) and Warwick in Alberta; Wild Goose and Lodi in California; Salt Plains in Oklahoma and 49% of Tres Palacios in Texas. In total, Rockpoint Gas Storage owns or contracts approximately 300 Bcf of gas storage capacity.

The purpose of this document is to outline the basic role and responsibilities of an IT Infrastructure and Security Analyst for Rockpoint Gas Storage and the associated reporting structure. It is not the intent of this document to specify all actual duties associated with the position, but to give a general understanding of the expectations and capabilities the position carries.

This position is located in Calgary, and will report directly to the Director, IT.

OVERVIEW

To support the IT business needs of the largest independently owned gas storage provider in North America. The successful candidate will be joining a diverse and talented team of IT professionals that take pride in their work. This role will also help support our vision and architecture roadmap for delivering the identification, tracking, monitoring, and containment of information security threats across a complex and dispersed IT environment. This position performs data collection and analyzes the risks to provide recommendations utilizing established processes and tools that focus on incident response, threat identification, containment and remediation. The position also uses data science principles to identify security events and incidents in order to facilitate the creation of new and advanced methods of detection and prevention.

TYPICAL DUTIES & RESPONSIBILITIES:

- Performs real-time security log and event analysis and acts within defined parameters to identify vulnerabilities and/or contain and mitigate security threats and escalate to the next level as needed based on severity
- Reviews and analyzes security events, alerts and determines their severity, and authors reports detailing the activity
- Provides timely follow-up to stakeholders as appropriate and keeps management informed of changes in status during issue resolution
- Monitor for attacks, intrusions and unusual, unauthorized or illegal activities
- Use tools to determine emerging threat patterns and vulnerabilities
- Work with IT groups to identify potential weaknesses and recommend measures to mitigate.
- Manage, deploy and identify improvements to infrastructure such as firewalls & switches
- Updates the IDS/IPS functions within the firewalls
- Performs changes to network as required
- Manage MPLS connection at one of our locations
- Update network infrastructure diagrams as required
- Manage the hybrid cloud phone solution networking
- Manage, deploy wireless cloud solution for all locations
- Update, document and maintain IT security best practices, policies and solutions
- Assess the latest IT security technologies and trends and their applicability to Rockpoint
- On call rotation with IT team
